

A92.11/11 : P-1-2 (2/69)

TOTAL POTATO STOCKS  
ON FEBRUARY 1, 1969

Release:  
February 12, 1969  
3:00 P. M. EST

Storage stocks of potatoes held by growers and local dealers in fall producing areas of the country totaled 103.2 million hundredweight on February 1, 1969, according to the Crop Reporting Board. This was 8 percent less than the 112.8 million hundredweight on hand February 1, 1968. These stocks consist of fall potatoes held for all uses on February 1.

Stocks in the eight eastern fall States totaled 33.8 million hundredweight on February 1, 1969 compared with 36.4 million a year earlier. Maine holdings were 25.5 million, slightly less than the 26.3 million hundredweight on hand a year earlier. February 1 stocks in other important eastern States were also below a year ago.

Holdings in the eight central fall States, at 21.9 million hundredweight this February 1, were slightly above the stocks of 21.8 million a year earlier. Larger stocks in North Dakota and South Dakota offset smaller holdings in the other central States.

In the nine western fall States, stocks were 47.6 million, 13 percent below the 54.6 million on February 1 last year. Holdings in all western States except Washington were below a year ago. Idaho stocks, estimated at 27.8 million hundredweight, were 16 percent less than on February 1, 1968, while Washington, at 7.0 million, was up 7 percent.

Disappearance of 1968 fall crop potatoes from storage during January 1969 was 25.6 million hundredweight, 4 percent below the January 1968 disappearance of 26.6. Disappearance of 1968 fall potatoes from time of harvest to February 1, 1969 was 116.8 million hundredweight compared with a disappearance of 118.5 million from the 1967 crop during the comparable period. Movement of 1968 fall crop potatoes to chippers and fresh market outlets during January and movement for the season to February 1 (as indicated by rail and truck unloads in 41 cities) were each slightly below a year earlier. The quantity of potatoes processed for other food products (excluding starch and flour) during January also was slightly below a year earlier but the season total to February 1 was above the comparable 1967-68 period. Movement of fall potatoes to starch factories during January and for the season to February 1 was below a year earlier level.
